

Butterflies, Spiders and Cancer.....OH MY!!

Did you know that according to a 2015 Chapman University Survey of American fears, the fear of **insects**, **illness** and **needles** all made an appearance?

FEAR is defined by Merriam-Webster dictionary as:
an unpleasant often strong emotion caused by anticipation or awareness of danger.

If you are curious about how to embrace the power of fear during and after a cancer diagnosis...

Then you are invited to join us for an educational and supportive program where you will have the opportunity to learn about and experience the thrill of spiders as well as discover strategies that will help you cope and live more fully with the fears that a cancer diagnosis often presents.
